

Hashir Iqbal

Full-Stack Developer · Cybersecurity Enthusiast · AI Explorer

rhashir54321@gmail.com · +92-313-1585840 · [hey-hashir.me](#) · [LinkedIn](#) · Haripur, KPK, Pakistan

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building modern web applications, mobile apps, and AI-integrated solutions. Skilled in React, TypeScript, Node.js, and Python, with a strong cybersecurity foundation including network security, threat detection, and SIEM tools. Passionate about writing clean, scalable code and delivering secure, user-focused products.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend & DB: Node.js, Python, MySQL, REST APIs

Mobile: Flutter, Dart

Cybersecurity: Nmap, Wireshark, SIEM Tools, Linux (Ubuntu, Kali), SQL Injection Testing

Tools & Other: WordPress, WooCommerce, Git, Arduino (IoT), C++

EXPERIENCE

Flutter App Development Intern

Jul 2024 – Sep 2024

Innova Workmen Information Technology, Abbottabad

- Built and optimized cross-platform mobile apps using Flutter and Dart, improving UI responsiveness and app performance.
- Collaborated with the development team on UI/UX design decisions, contributing to a smoother user experience.
- Participated in code reviews and applied best practices for mobile development lifecycle.

Frontend Web Developer Intern

Aug 2023 – Oct 2023

Brain Ex World, Abbottabad

- Developed responsive web interfaces using HTML, CSS, and JavaScript, ensuring cross-device compatibility.
- Worked within an agile team to iterate on designs, improving site performance and user engagement.
- Gained hands-on experience with modern front-end frameworks and web design principles.

WordPress Developer (Freelance)

2022 – 2023

Self-Employed

- Built and managed full e-commerce websites using WordPress and WooCommerce for multiple clients.
- Customized themes and plugins to extend functionality, reducing client reliance on third-party tools.
- Implemented on-page SEO strategies, improving clients' search engine visibility.

PROJECTS

MedicarePlusPlus | *React · Node.js · MySQL · AI/LLM APIs*

- Built a full-featured SaaS healthcare platform with separate portals for patients (free) and doctors (subscription-based), including live queue management and real-time appointment tracking.
- Integrated an AI symptom analysis engine that helps patients understand potential conditions before their consultation, and an AI diet planner providing personalized nutrition recommendations.
- Designed a comprehensive doctor dashboard with plan management, patient history, and analytics — handling billing and subscription flows end to end.

Gakhar Plaza POS | *React · Node.js · MySQL*

- Developed a full Point-of-Sale system for a retail business, covering product inventory, sales transactions, and receipt generation.
- Built a React frontend with a fast, keyboard-friendly checkout interface and a Node.js/MySQL backend for reliable data persistence.
- Implemented sales reporting and stock-level alerts to help store staff manage inventory in real time.

Litup Solar — Business Website with CMS | *WordPress · CMS · SEO*

- Designed and developed a complete business website for a solar energy company, including service pages, project showcase, and a contact/quote request system.
- Implemented a custom CMS setup allowing the client to independently manage content, blog posts, and service offerings without developer assistance.
- Applied on-page SEO and performance optimization techniques, improving page load speed and organic search discoverability.

TechnoLean Lab — Agency Website | *React · Tailwind CSS*

- Built a modern, responsive company/agency website for TechnoLean Lab, presenting services, team, and portfolio in a clean layout.
- Focused on performance and accessibility, achieving fast load times and mobile-first design across all screen sizes.
- Collaborated with the client on brand identity and visual language to deliver a site that accurately represents their tech services.

Line Following & Obstacle Avoidance Robot | *Arduino · C++ · IR & Ultrasonic Sensors*

- Designed and programmed an autonomous robot using Arduino with IR sensors for line tracking and ultrasonic sensors for obstacle detection.
- Implemented real-time decision-making logic in C++ enabling the robot to dynamically switch between line-following and avoidance modes.
- Demonstrated embedded systems principles, hardware-software integration, and sensor fusion in a physical prototype.

EDUCATION

Bachelor of Science in Computer Science

Expected 2026

Pak-Austria Fachhochschule: Institute of Applied Sciences and Technology, Haripur

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Google

Covers threat detection, network security, risk management, Linux, Python, and SIEM tools — with hands-on labs mapped to real-world SOC workflows.
